

Tisbury Vision Forum Community Meeting

Wednesday

November 29

6:00 PM

Tisbury Senior Center

Steve Zablonty will provide background information on Wayfinding and facilitate a discussion on local strategies.

Please note the start time and Location.

Designing a Wayfinding System in Vineyard Haven

Wayfinding refers to a coordinated information system that guides people through a physical environment and enhances their understanding and experience. It incorporates spatial characteristics, street conditions, sight lines, gathering areas, signs and markers. It is especially important in communities where there are a high number of visitors. A well designed way-finding system will help visitors --

- know where they are
-

- Know where they want to go
- know how to get there from their present location

This is especially important in Vineyard Haven where a way-finding system will create a welcoming sense of arrival, and help people orient when they arrive.

Join the Vision Forum to hear more about the Town's plans to design and implement a wayfinding system. Steve Zablony will provide an over view of wayfinding and facilitate a discussion of both the particular needs and opportunities in Vineyard Haven.
